

PARACLETE ENERGY

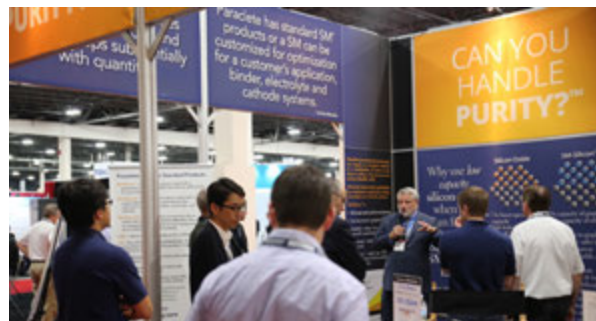

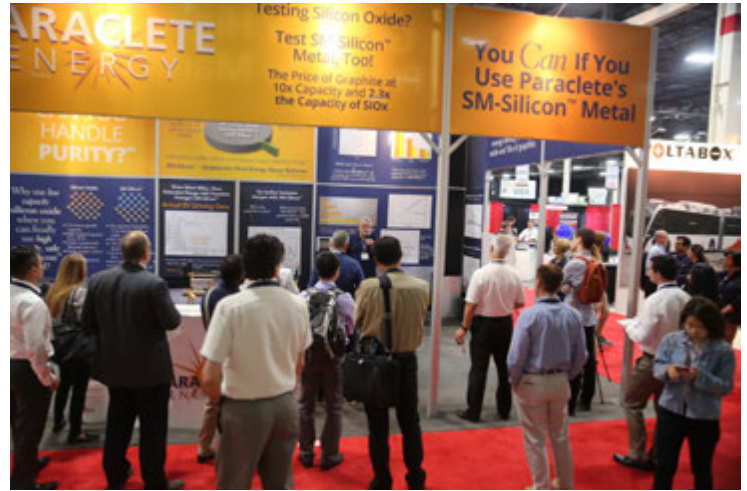

THE BATTERY SHOW NORTH AMERICA 2017

The North American Battery Show opened with a record-breaking 7,500 plus attendees. Paraclete Energy's CEO, Jeff Norris each morning addressed the large crowd gathered at the booth to discuss the benefits of Paraclete's 10X and 2.3X higher capacity, **Surface Modified SM-Silicon™** over graphite and SiO_x (a.k.a., oxide-covered silicon) respectively. The Paraclete Energy team remained quite busy as the booth remained crowded throughout the day and well after the close each night.

Although there were over 700 exhibitors, the Chairman of the show, at the close of the opening remarks, included only one company working with Li-ion batteries:

...Paraclete Energy is doing a wonderful job with new Li-ion active materials that is a movement afoot that will put the United States back in front of the technology game...

On Thursday, Paraclete's CEO spoke about **SM-Silicon™** and was an expert panelist in the forum on "Improving Battery Manufacturing Processes."
